techENVY

CAPABILITY STATEMENT

SUMMARY

techENVY provides full end-to-end project delivery, from planning and design through to implementation and ongoing support. Whether you're launching a new initiative or enhancing your existing environment, we offer a comprehensive service designed to align with your business goals.

For established businesses with an in-house IT team, we offer a co-managed approach. This means you retain control while we step in to extend your team's capabilities in areas where additional expertise or resourcing is required. Our focus is on collaboration, ensuring your internal team is supported, not replaced.

DIFFERENTIATORS

- **Personable Approach:** We take the time to build genuine relationships and understand our clients' businesses. This helps ensure each project aligns with what the business actually needs, not just the technical requirements.
- **Wide Technical Capabilities:** With solid experience across multiple vendors, cloud platforms and technologies, we can deliver a broad range of projects in-house without needing to outsource.
- **Business Acumen:** We understand that projects are an investment. We stay focused on the business outcomes from day one, making sure the delivery stays aligned with your goals throughout.
- **Flexible with Delivery:** We don't have a long queue of delayed projects, so we're able to stay agile when things change. If there's a hurdle, we talk through it and keep things moving without unnecessary delays.

INSURANCES

techENVY holds the following insurances:

- Professional Indemnity ($5m)
- Public Liability ($20m)
- Cyber
- WorkCover

Certificates of Currency can be provided on request.

- ✓ SD-WAN Design & Implementation
- ✓ Cyber Security Alignment (ISO, E8, RFFR)
- ✓ Unified Communications (VoIP, Cloud Phones)

Cloud Infrastructure:

- ✓ Microsoft 365
- ✓ Microsoft Azure

Services:

- ✓ Managed IT Services
- ✓ Managed Cyber Security
- ✓ Technology Projects
- ✓ Cyber Security Frameworks
- ✓ Cloud Computing
- ✓ Business Internet & Voice

TESTIMONIALS

"With the confirmation today that we have been recommended for certification, I just wanted to say a massive thank you on behalf of Sitback for all of the support and work you have both provided to get to this point. I really appreciate it and am very happy with the ongoing partnership with techENVY - thank you."

Matt • Head of Operations & Delivery • Sitback Solutions

"Anthony and the team at techENVY have been an integral operating partner for Merkon. They have designed and implemented a complete IT infrastructure transition helping migrate existing systems to a modern, cloud-based platform.

A huge thank you to all the team and look forward to our ongoing partnership"

Chris • Finance & Commercial Manager • Merkon Constructions

PROJECT EXAMPLES

Right Fit for Risk (RFFR) at Gimbal Group

techENVY delivered a modern workplace solution for Gimbal Group, a national business with offices across multiple states. We rebuilt their network from the ground up, centralised configuration and management, and implemented a managed IT services and cyber security solution tailored to their operational requirements.

A key requirement from the Department of Employment and Workplace Relations was that Gimbal Group meet the Right Fit for Risk (RFFR) standard. The solution we delivered was assessed by the department's Digital Solutions Division, and the network was certified as compliant with RFFR.

Modern Workplace at Uniting Church of Australia (VICTAS)

techENVY led the migration from a traditional data centre and Citrix-based environment to a modern workplace solution. The primary goal was to decentralise their computing needs and decommission legacy systems, enabling staff to work securely from anywhere using the full Microsoft 365 platform.

We planned, designed and implemented the solution for hundreds of users, delivering a cloud-only, zero-touch deployment model for computer provisioning. Devices are now fully managed in the cloud, eliminating the need for on-prem infrastructure and improving operational flexibility.
